

ART DRONE

Bryceson Williams

Advisor: Cody Crosby

PROJECT SUMMARY:

This project will be the use of a drone that can move effectively and precisely. This is important as its main purpose will be to create pictures using paint or other media. It will require excellent hovering capabilities, along with the capacity to carry a small amount of extra weight. This extra weight is to account for the additional parts to be added to the drone upon completion for its ability to paint. There will be an addition of small, pressurized cans of spray paint along with a brush for more precise movements. The hope of this project is to create something that can create murals or signs in locations that are hazardous or too difficult for humans to reach. This could range from important signage for public events to murals in high locations.
